1st YEAR, CSE DEPARTMENT

ITA144-ETHICAL HACKING

LAB MANUAL

Exercise No 1: Nmap Scan

Aim:

To install and perform Nmap scan (note :- you may use ip address or website name)

Procedure:

Step 1: Open Nmap from Kali Linux (Goto Applications->select Information Gathering->select Nmap)

Step 2: Perform different types of scan
(Tcp, Udp, Ack, Syn, Fin, Null, Xmas, Rpc, Idle)- scan types

Scanning Techniques

Flag	Use	Example
-sS	TCP syn port scan	nmap -sS 192.168.1.1
-sT	TCP connect port scan	nmap -sT 192.168.1.1
-sU	UDP port scan	nmap -sU 192.168.1.1
-sA	TCP ack port scan	nmap -sA 192.168.1.1

Step 3:-

To perform host discovery

-Pn	only port scan	nmap -Pn192.168.1.1
-sn	only host discover	nmap -sn192.168.1.1
-PR	arp discovery on a local network	nmap -PR192.168.1.1
-n	disable DNS resolution	nmap -n 192.168.1.1

Step4:-

Port Specification

<u>Flag</u>	<u>Use</u>	<u>Example</u>
-p	specify a port or port range	nmap -p 1-30 192.168.1.1
-p-	scan all ports	nmap -p- 192.168.1.1
F	fast port scan	nmap -F 192.168.1.1

Step 5:-

Service Version and OS Detection

Flag	Use	Example
-sV	detect the version of services running	nmap -sV 192.168.1.1
-A	aggressive scan	nmap -A 192.168.1.1
-O	detect operating system of the target	nmap -O 192.168.1.1

Step 6:-

Timing and Performance

Flag	Use	Example
-T0	paranoid IDS evasion	nmap -T0 192.168.1.1
-T1	sneaky IDS evasion	nmap -T1 192.168.1.1
-T2	polite IDS evasion	nmap -T2 192.168.1.1
-T3	normal IDS evasion	nmap -T3 192.168.1.1
-T4	aggressive speed scan	nmap -T4 192.168.1.1
-T5	insane speed scan	nmap -T5 192.168.1.1

The following experiment is done using Nmap tool in root terminal in kali Linux server. I have used all the commands that are available in Nmap tool.

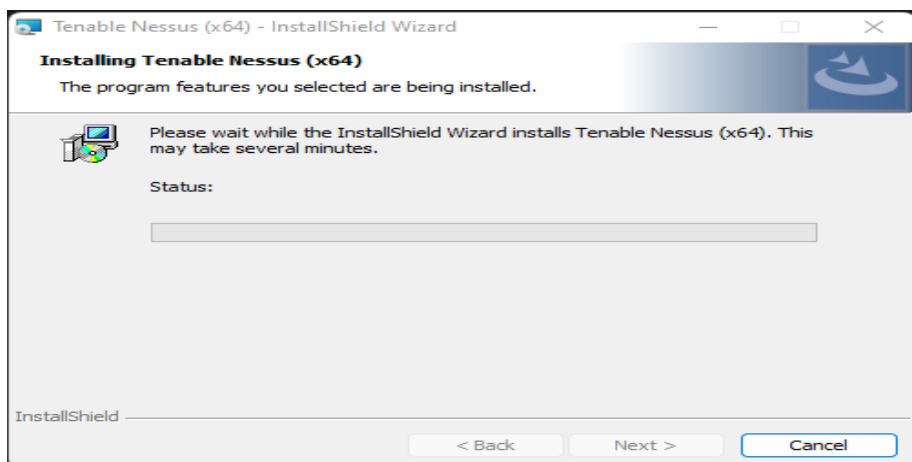

Exercise No 2: Vulnerability Access Scan Using Nessus

Aim : To Download and install Nessus tool and perform a Vulnerability Access scan in kali Linux Operating systems.

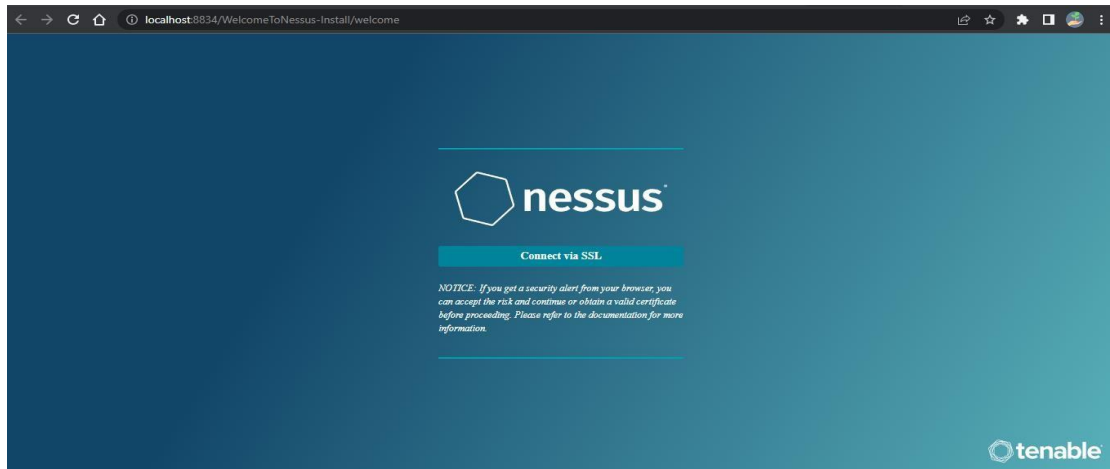

Step 1:- <https://www.tenable.com/downloads/nessus?loginAttempted=true>

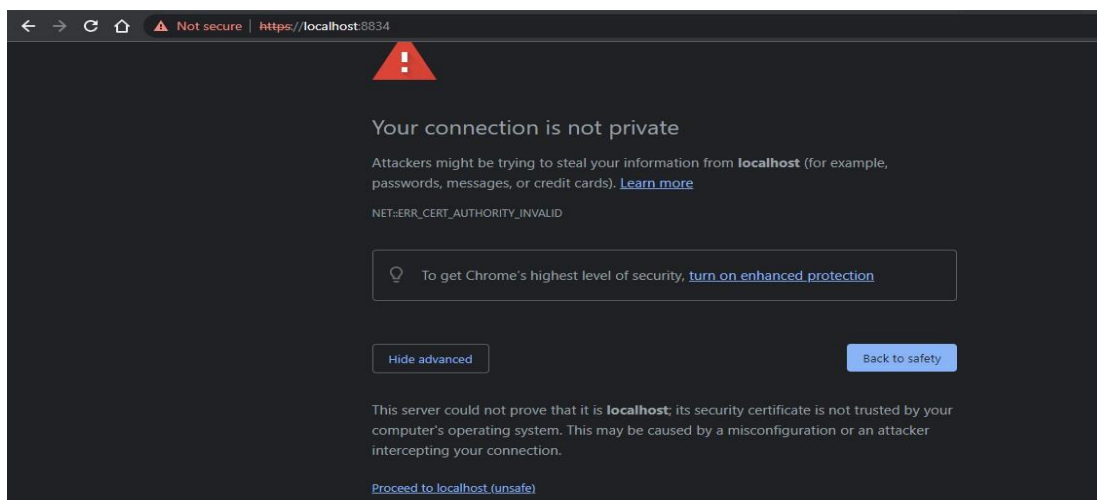

Step 2: Choose your OS and download , install

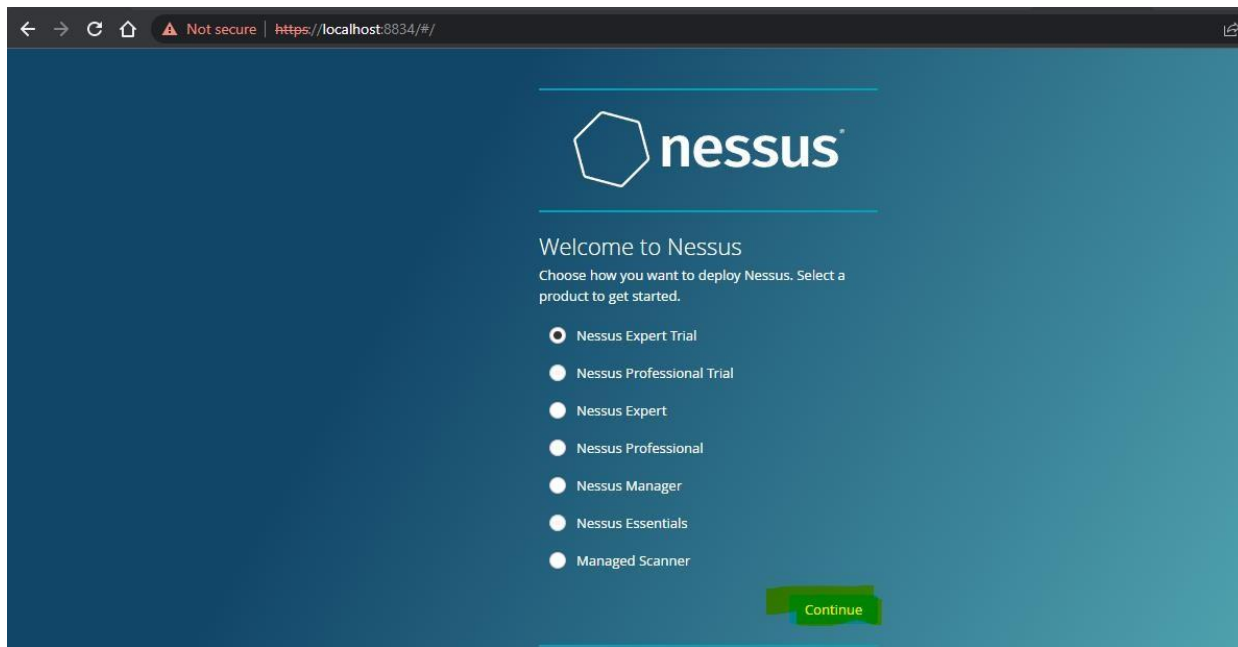

Step 3: Once installation is completed it will open in default browser

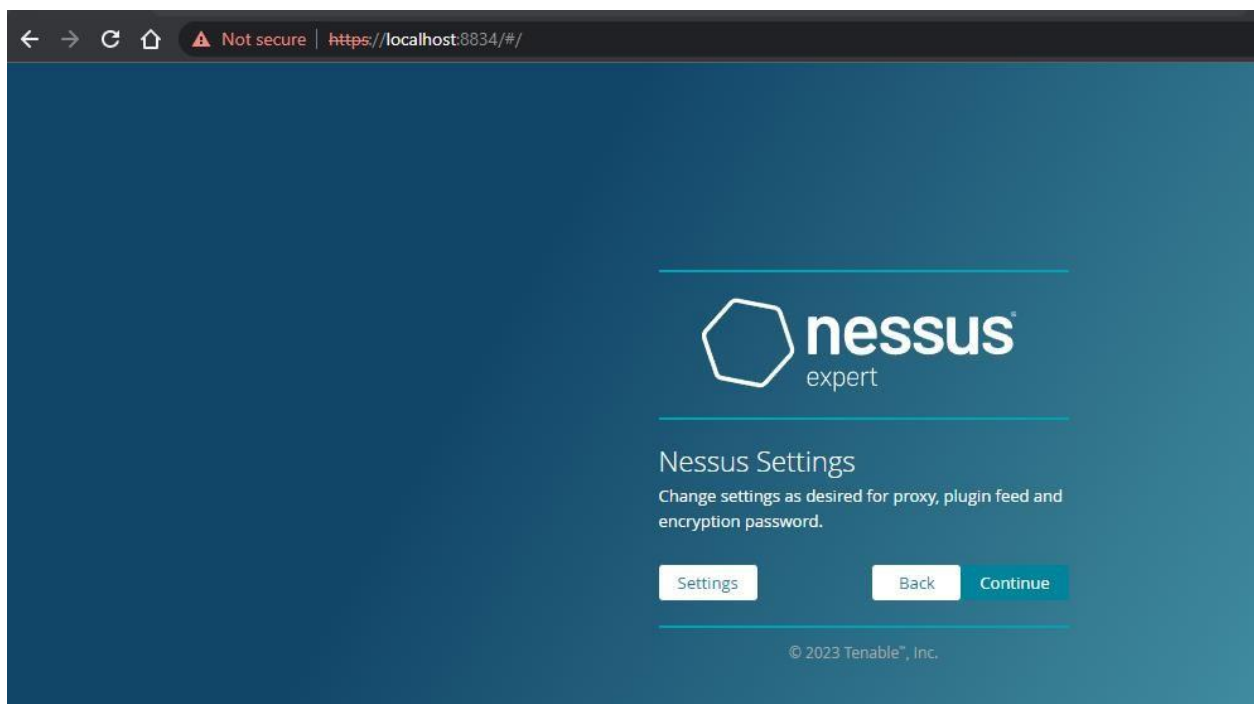

Step 5:- (click on the proceed to local host)

Step 6:- Please choose the Nessus Expert

Step 7: Click on continue

Step 8:- Register with your organizational email id

The following experiment is done using Nessus website in windows operating system. I have done this experiment in google chrome of windows operating system.

Exercise No 3: Information gathering using theHarvester

Aim: To demonstrate information gathering using theHarvester

Procedure:

STEP 1: Open Terminal in the kali linux

`-d [url]` will be the remote site from which you wants to fetch

`-l` will limit the search for specified number.

`-b` is used to specify search engine name.

STEP 2: Run the following command

Command: theHarvester -d www.zoho.com -l 300 -b all

Exercise No 4 - Open Source Intelligence Gathering Using OSRFramework

Aim: To Checks for the Existence of a Profile for given user details in differentplatforms

Procedure:

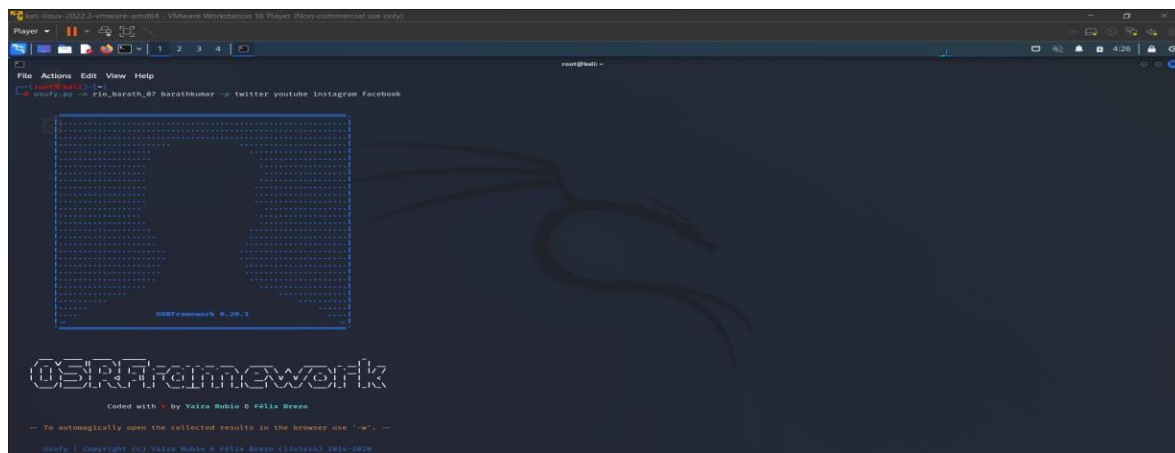

Step 1: Log into kali linux machine

Step 2: Launch a command line terminal by clicking on terminal icon from taskbar

Step 3: Usufy.py checks for the existence of a profile for given user details in different platforms

Command:

Usufy.py -n <Target username or profile name> -p twitterfacebook youtube

If any error occurs Try this command:**Sudo apt-getupdate**

The usufy.py will search the user details in the mentioned platform and will provide you with the existence of the user

The desktop background is a blue abstract image. The taskbar at the bottom shows the Start button, a search bar, and several pinned applications including VLC media player, WhatsApp, and qBittorrent. The system tray on the right shows the date and time as 2:12 PM on 5/13/2023.

Result:

I have carried out the above experiment using Microsoft windows command prompt. I have used the commands TraceRoute, ping, ifconfig, ipconfig, netstat in this experiment. I have got the results for each command like ping, IP addresses, LAN connections.

Exercise No 7:VULNERABILITY ANALYSIS - CGI Scanning with Nikto

Aim:To perform vulnerability Analysis using CGI Scanning with Nikto

Procedure:

Step 1: open a terminal window and type nikto -H and press enter

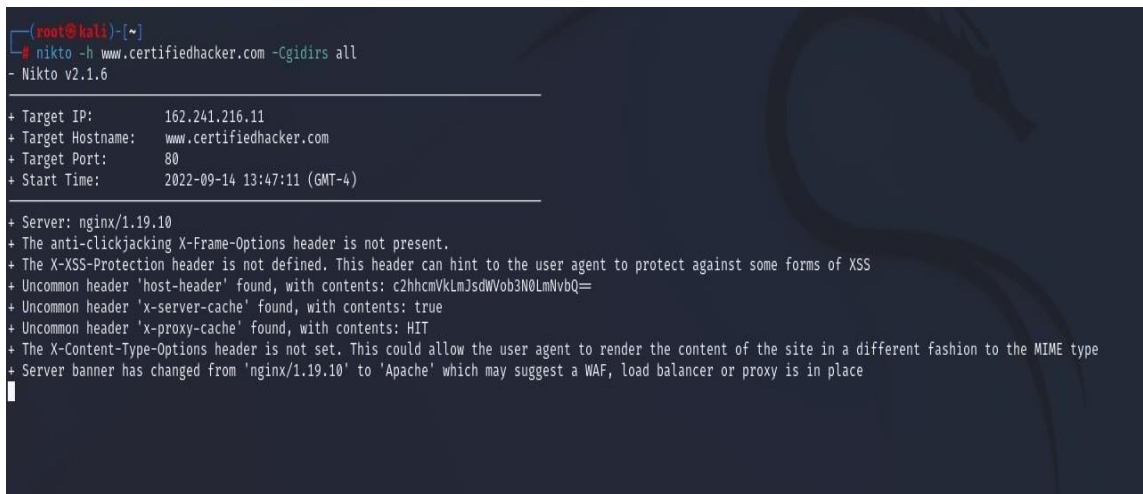

Step 2: Type nikto -h <website> Tuning x and press enter

```

Exercise No 8: WireShark sniffer

Aim: Use WireShark sniffer to capture network traffic and analyze.

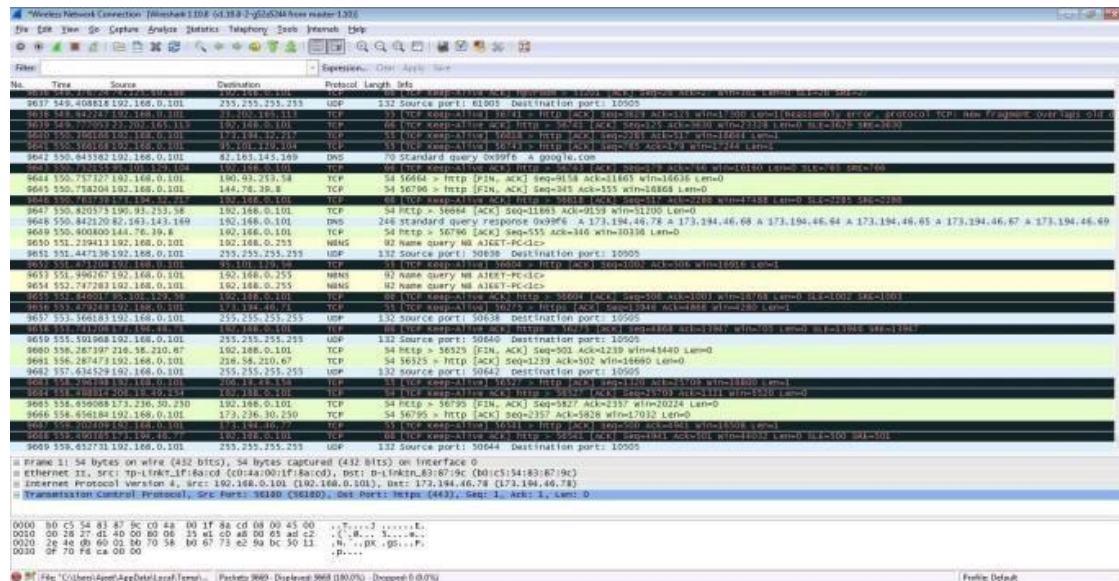

Procedure:

Step 1: Install and open WireShark .

Step 2: Go to Capture tab and select Interface option. Here Wifi connection is chosen

Step 3: The source, Destination and protocols of the packets in the Wifi network are displayed

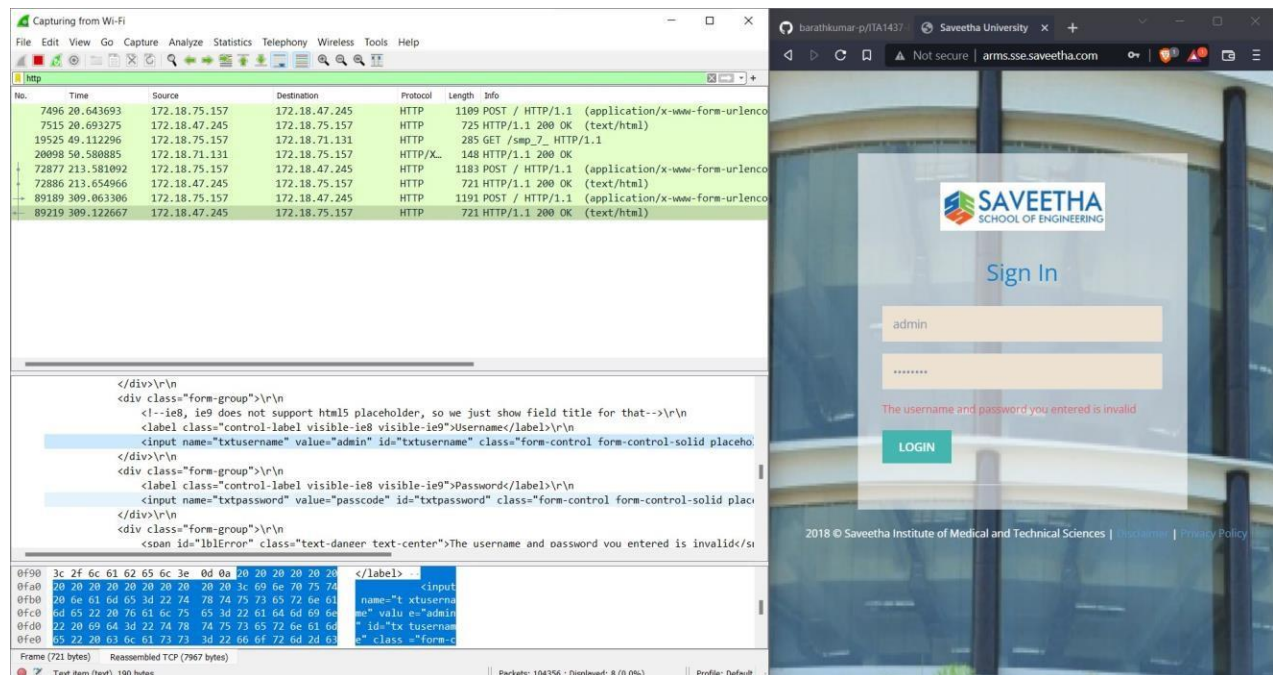

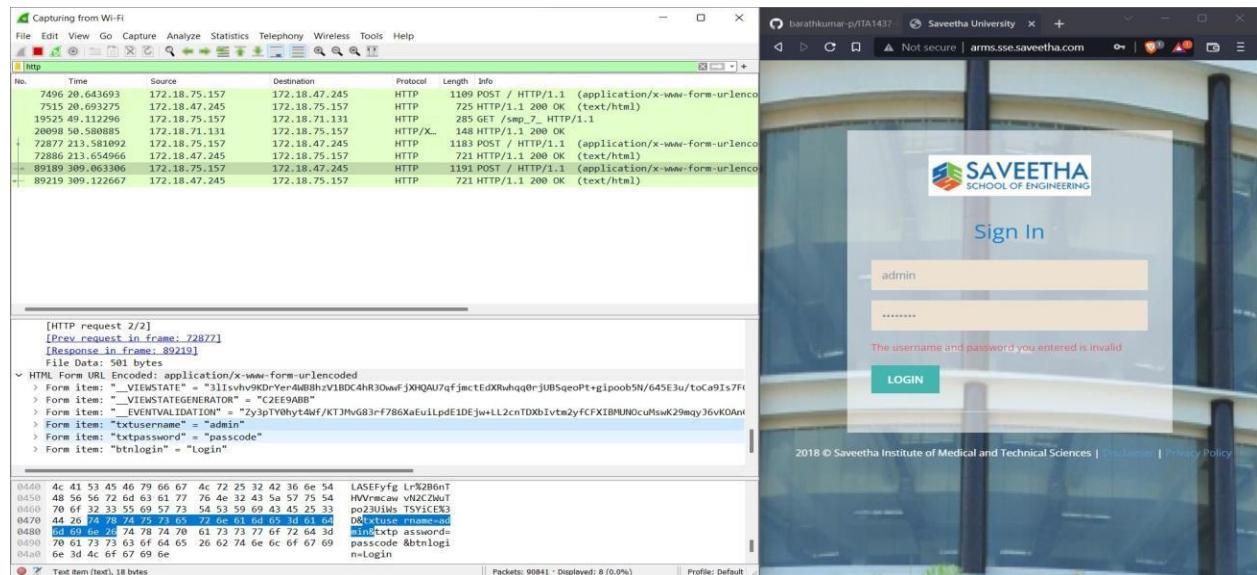

Step 4: Open a website in a new window and enter the user id and password. Register if needed.

Step 5: Enter the credentials and then sign in

Step 6: The Wireshark tool will keep recording the packets.

Step 7: Select filter as http to make the search easier and click on apply.

Step 9: Now stop the tool to stop recording

Step 10: Find the post methods for username and passwords

Step 11: You will see the email-id and password that you used to log in.

Output:

1)

The image displays two side-by-side screenshots from a Windows desktop. The left screenshot shows the Wireshark network traffic analysis tool. The top pane, labeled 'http', shows a list of captured packets. The bottom pane shows the details of the selected packet (No. 11370), which is an HTTP POST request to '/appauth.aspx'. The 'Form' section of the details pane lists the following items: 'EVENTARGET' (empty), 'EVENTARGUMENT' (empty), 'VIEWSTATE' (base64 encoded), 'VIEWSTATEGENERATOR' (F8F8F8F8), 'EVENTVALIDATION' (base64 encoded), 'txtusername' (value: 'koppiahraj sir'), 'txtpassword' (value: 'ethical hacker'), 'btnlogin' (value: 'Login'), and 'txtappno' (empty). The right screenshot shows a Google Chrome browser window with the URL 'arms.sse.saveetha.com'. The page displays the 'SAVEETHA SCHOOL OF ENGINEERING' logo and a 'Sign In' form with fields for 'Username' and 'Password', and a 'LOGIN' button. The footer of the page reads '2018 © Saveetha Institute of Medical and Technical Sciences | All Rights Reserved | Privacy Policy'.

Result:

The current experiment is about wireshark sniffer. Using WireShark sniffer, we can capture network traffic and can be able analyze it. This experiment executed using google chrome.

Ex. No.9 – ENUMERATION - Enumerating information from windows and Samba Host Using Enum4linux

Requirements:

- Kali linux running as an attacker machine
- Windows 7 running as virtual machine
- Admin privileges

Procedure:

- 1.Start the kali linux machine and open a terminal window
- 2.Type “sudo apt-get update” command
- 3.Now type enum4linux-h and hit enter to get help options With the help options conduct the enumeration on target machine
- 4.In the terminal window type enum4linux -u -p -U and hit enter to run this tool using the user list options
- 5.Enum4linux starts enumerating the workgroups/domain names first and display the results
- 6.To enumerate all the information Use this command enum4linux -a.

EX.NO: 10 BATCH FILE EXECUTION

AIM:

To create a Windows batch file.

PROCEDURE:

Step 1: Open a text file, such as a Notepad or WordPad document.

Step 2: Add your commands, starting with @echo [off], followed by, each in a new line, title [title of your batch script], echo [first line], and pause.

Step 3: Save your file with the file extension BAT, for example, test.bat.

Step 4: To run your batch file, double-click the BAT file you just created.

Step 5: To edit your batch file, right-click the BAT file and select Edit. And here's the corresponding command window for the example above:

1.Create a New Text Document:

A batch file simplifies repeatable computer tasks using the Windows command prompt. Below is an example of a batch file responsible for displaying some text in your command prompt. Create a new BAT file by right-clicking an empty space within a directory and selecting New, then Text Document.

1.CODE:

Double-click this New Text Document to open your default text editor. Copy and paste the following code into your text entry:

```
>> @echo off
>> echo hello
>> Pause
>> echo This is new
>> echo this is second one
>> pause
```

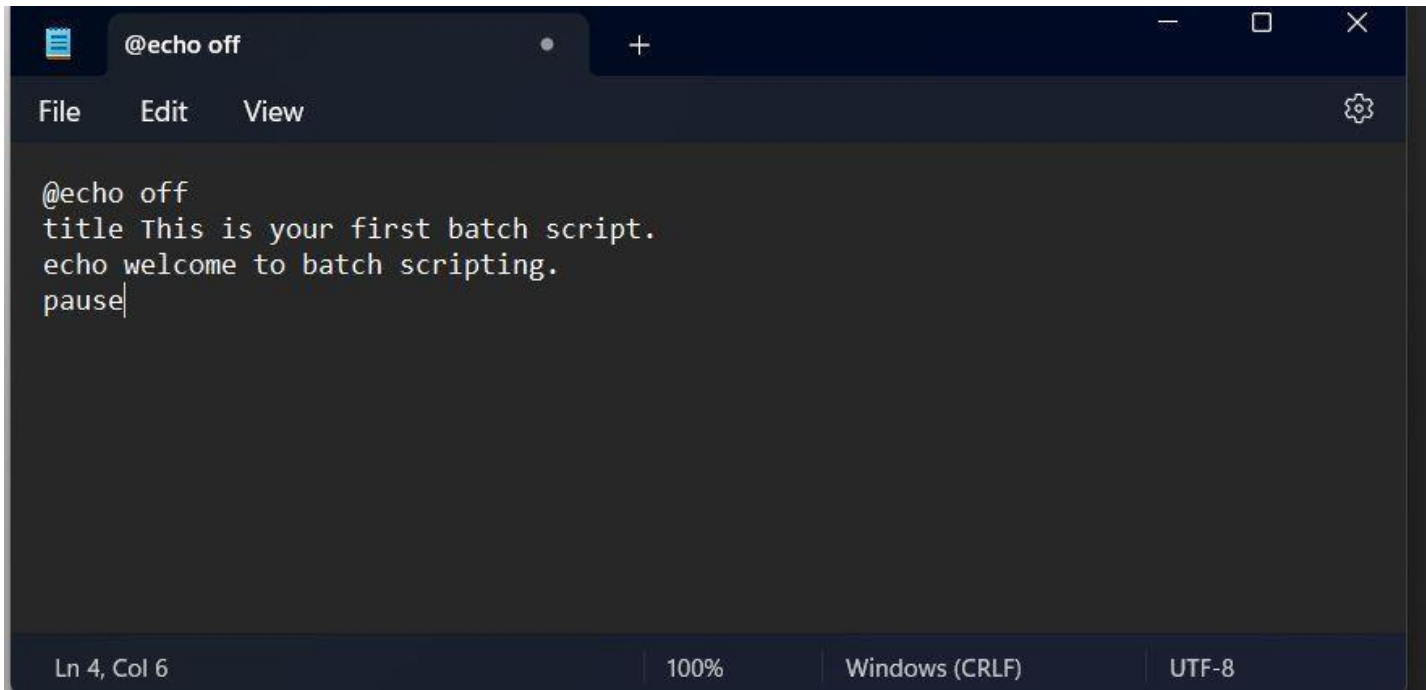

1. TO SAVE a BAT File

The above script echoes back the text "Welcome to batch scripting!" Save your file by heading to File > Save As, and then name your file what you'd like. End your file name with the added BAT extension, for example test.bat, and click OK. This will finalize the batch process. Now, double-click on your newly created batch file to activate it.

2.To RUN as BAT File

Once you'd saved your file, all you need to do is double-click your BAT file. Instantly, your web pages will open. If you'd like, you can place this file on your desktop. This will allow you to access all of your favorite websites at once.

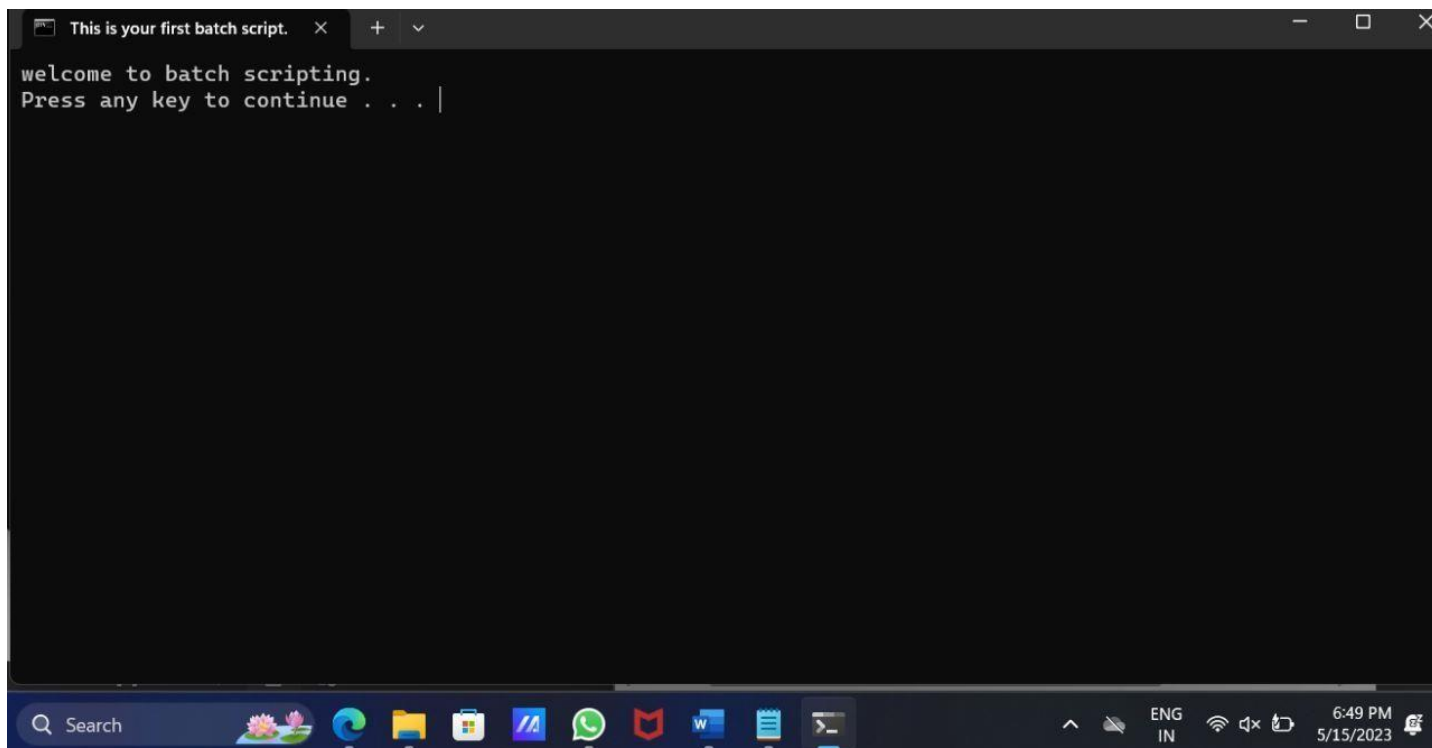

OUTPUT:

A screenshot of a Notepad++ editor window. The title bar shows the file name "@echo off". The menu bar includes "File", "Edit", and "View". The text area contains the following batch script code:

```
@echo off
title This is your first batch script.
echo welcome to batch scripting.
pause
```

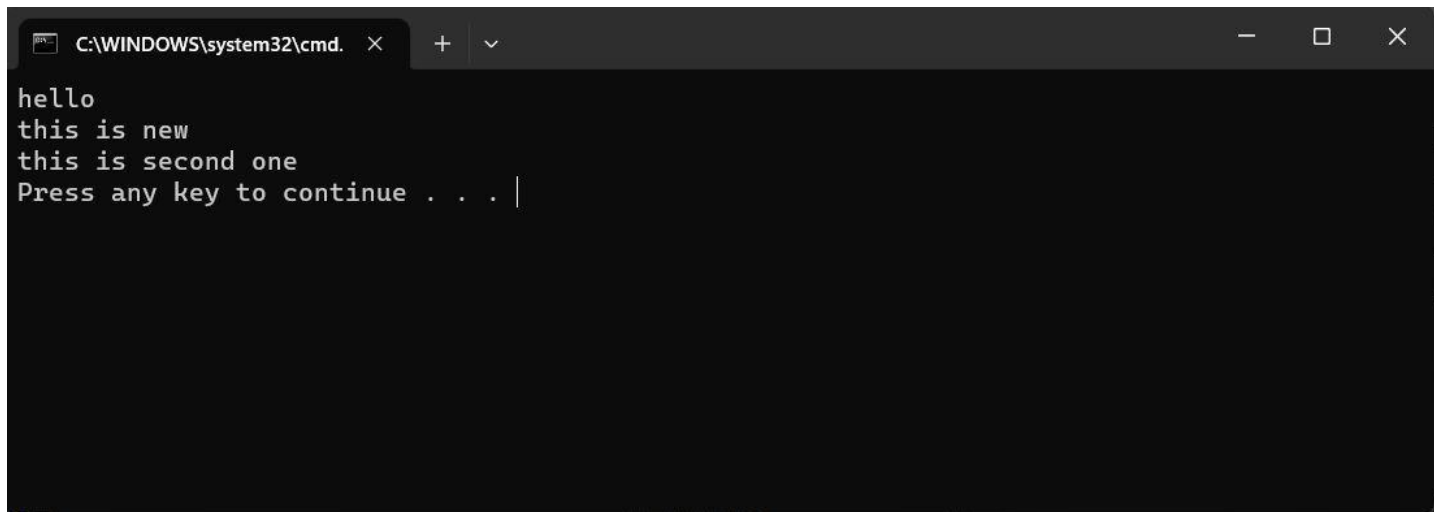

The status bar at the bottom indicates the cursor is at "Ln 4, Col 6", the zoom is "100%", the encoding is "Windows (CRLF)", and the character set is "UTF-8".

A screenshot of a Windows command prompt window. The title bar shows the window title "This is your first batch script.". The text area displays the output of the batch script:

```
welcome to batch scripting.
Press any key to continue . . . |
```

The Windows taskbar is visible at the bottom, showing the search bar, task view button, and several application icons. The system tray on the right shows the date and time as "6:49 PM 5/15/2023".

A screenshot of a Windows Command Prompt window. The title bar shows the path 'C:\WINDOWS\system32\cmd.' and standard window controls. The command prompt displays the following text: 'hello', 'this is new', 'this is second one', and 'Press any key to continue . . . |'. The text is in a monospaced font on a black background.

```
C:\WINDOWS\system32\cmd. X + v  
hello  
this is new  
this is second one  
Press any key to continue . . . |
```

Result:

The above experiment is carried out using windows command prompt. The main aim of this experiment is to create a windows batch file using batch file extension. After this experiment, I was able to create a windows batch file using sufficient data.
